CAMPLUS + SHAPE

EMMEGISOFT MACHINE SOFTWARE

To program the machining centres, Emmegi offers the CAMplus software (which can be integrated with the additional Shape, DriverCAD and DriverCL modules). CAMplus allows you to program machining graphically in 3D, displaying the profile and the tool. The software includes the most frequent figures (holes, slots, rectangles, etc.), which broaden with the additional option Shape, which is used to freely design figures of any shape, freely composing lines, arcs, holes. It is also possible to import figures in DXF format. The 3D display helps better understand the figures at non-constant depths. With Shape, machining operations that would otherwise be achieved by arranging “standard” figures are now faster. With the DriverCAD option, designs made with CAD-3D programs can be imported. For those who work in the window/door manufacturing sector, CAMplus is fully integrated with EmmegiSoft’s FP Pro calculation software, and is also interfaceable, through the DriverCL option, with the most widely available software on the market.
