FP DEALER “MASTER LT” - TERMINAL SERVER

EMMEGISOFT OFFICE
CALCULATION SOFTWARE

FP DEALER:

FP DEALER is a program linked with FP PRO. It is used to process estimates and orders, starting from predefined price lists. It is targeted towards door/window makers who can work out their own sales lists to define the price grid, technical constraints, standard features and possible variants. As well as internally, price lists can be used by sale network through Internet, by the WEB VIEW software. The orders are then converted into production-ready FP PRO jobs, without any need for paper documents and without ever having to re-enter the information.

"MASTER LT" version:

The version for window/door manufacturers who only process estimates internally without a sales network. It is used to create the company's own price lists, starting from the FP PRO calculation or entered manually, and to apply them directly for creating estimates and orders. The orders can be converted automatically into FP PRO jobs ready for production.

"MASTER LT" - TERMINAL SERVER version:

The version for Terminal Server (in which both software and data are installed only on the server) has the advantage of an easy maintenance, an increased operating speed and a flexible use, also from remote locations via the Internet, under the condition of not exceeding the maximum number of allowed concurrent users.
