FP FACADE

EMMEGISOFT OFFICE CALCULATION SOFTWARE

FP FACADE is an additional module of FP PRO, specifically designed for handling traditional, semi-structural and structural flat curtain walls. Planning, that can be also imported by CAD, is made easy by the user-friendly design process, which displays: guided setting of type (suspended, flush, supported, hung) and dimensions; graphic positioning of floors, stiles and rails; profile code selection for components (stiles, spacers, pressure plates, cover plates); calculation of the moment of inertia; application of fittings to joints and floor connections, etc, all the way through to the generation of costs, estimates and material lists.
