## LINK

Manual assembly benches

Roller bench designed for connecting workstations and allowing extremely easy frame transfer, even in case of heavy pieces.

## Tilting roller conveyor

The surface is composed of rows of rollers coated with soft PVC; the two ends of the roller conveyor on the right and left can be tilted by means of pneumatic cylinders (optional).

Surface in soft nonslip PVC

The machine can be optionally equipped with a soft PVC support surface. The soft PVC support surface provides a high friction coefficient, which is a valuable asset during assembly procedures.

## Roller bench

The support surface is formed of a large number of rollers with antiscratch rubber coating to ensure high speed handling of the frame.

## Adjustable feet

Height adjustable feet to ensure the work bench can be positioned at the required height and perfectly flush with the other products in the Dynamic Line. The feet also have holes so they can be anchored to the floor.
