

DRIVERCL PLUS

EMMEGISOFT MACHINE SOFTWARE

DriverCL, an add-on module of CAMplus, is the software that interfaces with window/door software, management software and CAD/CAM software. It enables importing worklists (in "USTD" and "NCX" formats) and data on: job, profile, workpieces, machining operations (up to 5 axes), tools, free figures, vices. Thanks to DriverCL office-workshop connection is simpler. DriverCL Plus is compatible only with external calculation programmes using the "standard" Emmegisoft format. The additional functions of DriverCL Plus - direct management of vices position and workpiece support stops - require the external calculation programme to manage this information. The DriverCL Plus application requires a preliminary check on the customer's machine. The Terminal Server version (in which both software and data are installed only on the server) offers the advantage of simplified maintenance, faster operation and flexible use, including from outside via the Internet, provided the maximum number of concurrent users is not exceeded.
