

## Vega 550-450

Single head cutting-off machines

Single-head cutting-off machine with horizontal blade feed and left loading side, pneumatic double side tilting of the cutting head in fixed positions: 45° to the left, 90°, 45° and 22°30' to the right. A special positive stop also allows cutting at intermediate angles.

### **Head 45°/ 22°30'**

Applied technical solutions ensure fast and precise angular positioning of the head, which can be equipped with 450- and 550-diameter cemented carbide blades. Thus the distinct vocation of this machine for the production of windows and doors is outlined, ensuring reliability and precision over time.

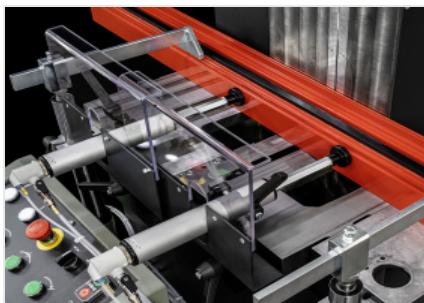

### **Safety systems**

The machine is equipped with a localised blade protection system, which does not interfere with the positioning of the workpiece but, at the same time, ensures the safety of the operator.

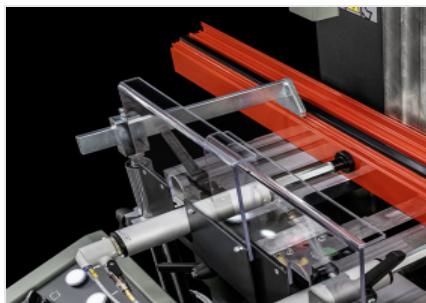

### **Control**

Control console that allows the implementation of left and right head tilt through the use of quick and intuitive controls. With the unloading/measuring roller conveyor stand on the right side, the length of the workpiece to be cut is determined, referenced to the centre of the blade.

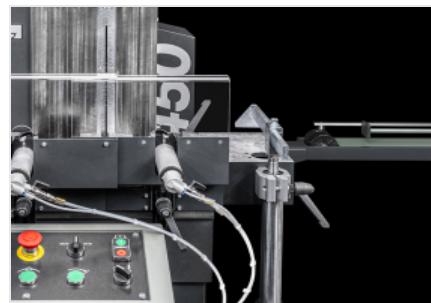

### **Vices**

The cutting-off machine is equipped with a horizontal and vertical vice assembly (optional), which is characterised by extremely fast positioning and effective clamping.

### **Vertical pneumatic vice (Optional)**

If necessary, you can install a left vertical vice or a pair of vertical vices (both left and right) to perfectly clamp profiles of even more complex shapes.

### **Provision for loading the profile from the right (Optional)**

The machine is designed to accommodate a special roller conveyor positioned on the right side. Their function is to support profiles of considerable length and to ensure correct positioning of the workpiece in the machine.

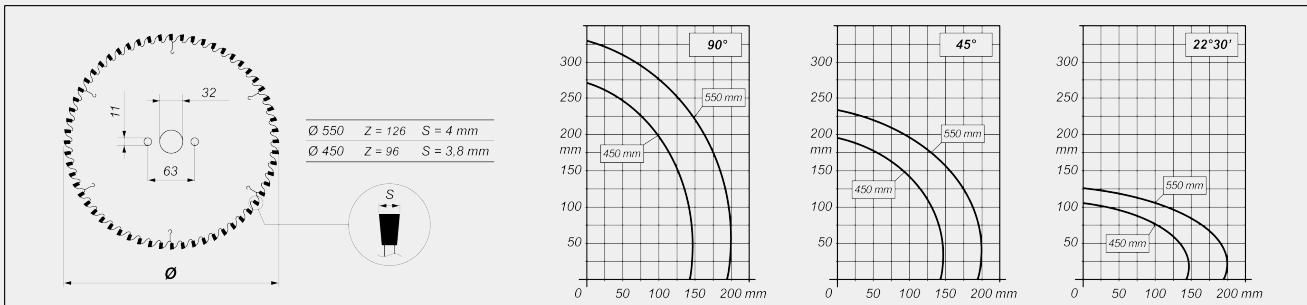

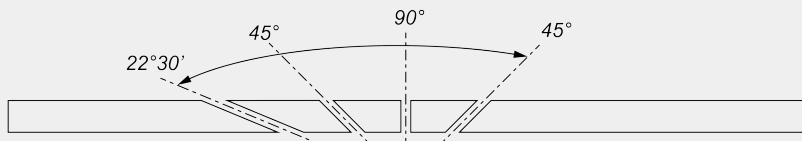

**VEGA 550-450 / SINGLE HEAD CUTTING-OFF MACHINES**
**BLADE**

Made of Widia (based on model) (mm)

$\varnothing = 450$ ;  $\varnothing = 550$

**BLADE FEED**

Hydro-pneumatic

**CUTTING DIAGRAM**

**CUTTING UNIT TILTING**

Mechanical adjustment of intermediate angles

**CUTTING AREA PROTECTION**

Local, pneumatically control

**LUBRICATION SYSTEM**

Micro-mist lubrication system with water and oil emulsion
